

**Westec Shpk** was established in 2009, based in Tirana. The company is characterized by a dynamic team, always ready to meet customer requirements. The name **Westec** “European Technology Transfer” is based on the quality and excellence of welding products, cooperating with the most prestigious European firms in this field.

We offer solutions for several industries such as:

- Power generation
- Oil & Gas industry
- Welding
- Chemical Industry
- Tooling
- Cement industry
- Steel manufacturing

**Westec Shpk** has been operating in the Albanian market for several years, as one of the few contemporary firms in the fields of welding, projects and further consulting by the best engineers. Cooperation with the Austrian and German companies has provided Westec with a secure product base to provide the customer with a quality service.

## POWER GENERATION

Due to experience and constant innovation we supports the improvement of plant efficiency and effectiveness. The products meet the high standards of product safety and reliability and achieve safe and trouble-free long term operation and productivity.

## OIL & GAS INDUSTRY

For the oil & gas upstream, midstream and downstream segments, we offers solutions based on high-quality welding consumables for safe, efficient and cost effective operation of production equipment and plants.

## CEMENT INDUSTRY

The handling of very abrasive material, together with 24/7 operation makes the cement industry to one of the most severe environments for production machinery in terms of wear. Wear leads to losses in the efficiency and quality of the machinery. It also leads to increases in maintenance costs.

## CHEMICAL INDUSTRY

The chemical industry requires specific construction materials and uses a wide range of corrosion resistant alloys in equipment exposed to highly corrosive environments, high pressures and temperatures in vessels, tanks, valves, pumps, compressors, agitators, etc. We operate in every area of the chemical industry and supplies specifically designed welding consumables for all welding processes.

## STEEL MANUFACTURING

In order to meet the high requirements of high quality steel grades, steelworks must have a highly effective production process. However, at every step of the steel making process, the equipment is subjected to severe wear: abrasion, corrosion, impact, thermal fatigue, metal to metal friction, etc. From raw material handling to sintering to continuous casting and hot or cold rolling, all areas affected by wear can be repaired using customized overlay welding solutions.

## WELDING

**voestalpine**

ONE STEP AHEAD.

Collaboration with **Voestalpine Böhler Welding & Voestalpine Precision Strip GmbH** have brought quality products. **Voestalpine Böhler Welding** has been operating through more than 1,000 distribution partners worldwide with the support of 2,300 employees in more than 25

countries. **Westec** associates a strong and well-established partner in position as one of the largest producers in the world. Westec has continually assisted engineering customers with welding engineers from Austria and Germany by introducing technological innovations in this activity.
